

# FENCE™ TANK.

## Save water using a practical, good looking, easy to install solution

An innovative new answer for urban rainwater collection  
that seamlessly fits into the perimeter of your fence.

## Colour options to fit your look

Three colours as shown below, or go all out with our range of custom colour options available on request (minimum order 20 units & quoted cost). Colour matched end panels and caps sold separately.

Birch Grey

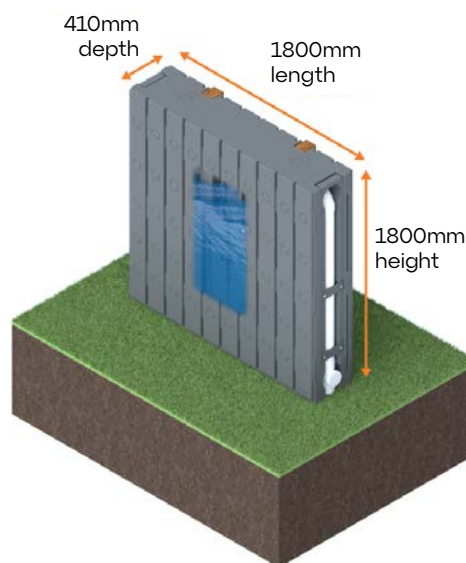

Slate Grey

Black

## Tank Specifications

Single FenceTank  
**Capacity:**  
 1,000 litres.

Single FenceTanks can be joined end-to-end or off-set (dog legging) to avoid issues around a requirement for easements and ensures your property has its tanks on its title, while minimising space occupied by the tank.

## Talk to us about a design consultation

While FenceTank can be ordered 'off the shelf', we offer a design consultation as part of our service and can also advise on the best pump solution.

Our team of experts understand local Council and legislative requirements. We also appreciate your need to meet deadlines and budget so will send you a layout within a few days of your brief.

## Benefits

**Saves space:** one of the narrowest above ground tanks on the market at only 410mm deep. Attaching to fence posts on the boundary means they only encroach on side or backyard space by no more than 336mm.

**Seamless integration:** Same height as a standard fence – no ugly plastic tank or pipework above the fence line. Fence can run seamlessly up to the tanks. Rails and palings can be attached to posts behind the tank to protect the 'other side'.

**Quick and easy to install:** a concrete base and just six coach screws and washers to attach to fence posts (sold separately). No costly HIABs or difficult to install steel posts. Attach to a wall with two Z brackets (sold separately).

**Attractive:** for a tank. Designed to look like a fence so doesn't need screening.

**Hidden pipe work:** No ugly pipework or appearance above the fence line, all pipework is hidden within the ends of the tank itself.

**Potable water friendly:** Tank grade plastic so can be used for potable water or stormwater, ideal for re-use systems.

**Easily extended:** Can be joined together for a seamless installation (three tanks = 5.4 lineal metres).

**Economic options:** Precut pipeline kits available separately for a quick economic install.
