

RAINSTICK

Save up to 80%
on both water and
energy all while
enjoying a luxurious,
high-pressure shower.

RainStick is an award-winning and elegantly designed solution that hygienically recycles your shower water.

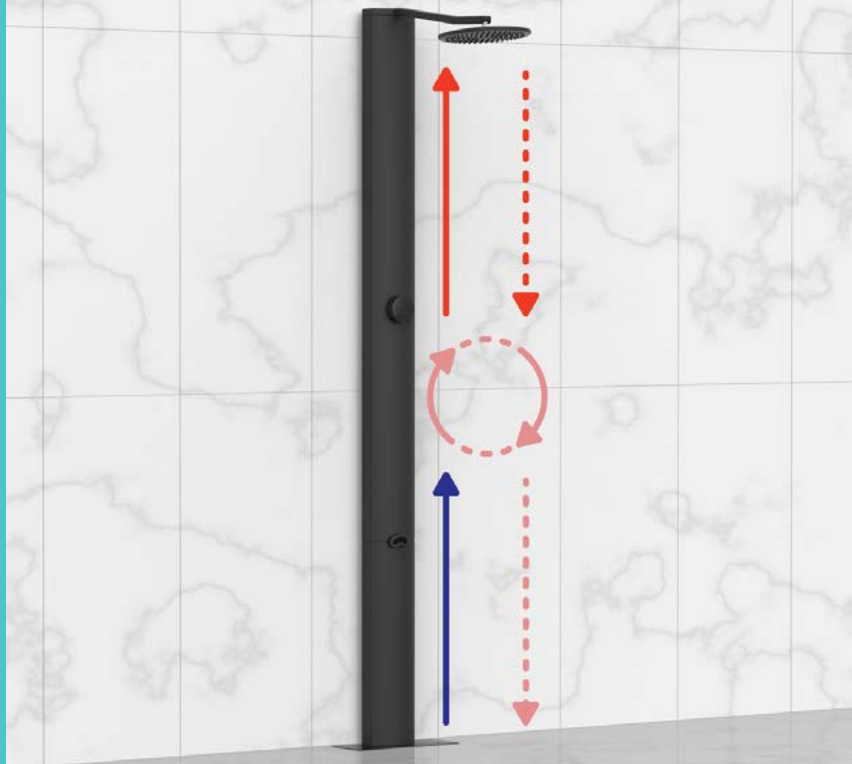

How does it work?

The RainStick system starts with Council supplied water, just like your current shower. The difference? RainStick captures, circulates, and cleans the water in real time, so it doesn't go to waste.

Micron-level screens catch larger debris, while UV-LEDs disinfect water by killing bacteria and viruses.

Every loop is continuously refreshed with a little fresh hot water to maintain the desired temperature with no water being transferred between shower sessions.

Benefits

Experience the savings: Innovative technology saves up to 80% water and energy, allowing you to be more sustainable without compromising on your shower experience. Save up to 2,192 kWh of energy per year, every year.

Self-cleaning: The automatic self-cleaning after every shower session using RainStick's Original Cleaning Product addresses 99.99% of exposed bacteria and viruses, including Legionella, making RainStick one of the safest showers on the market today.

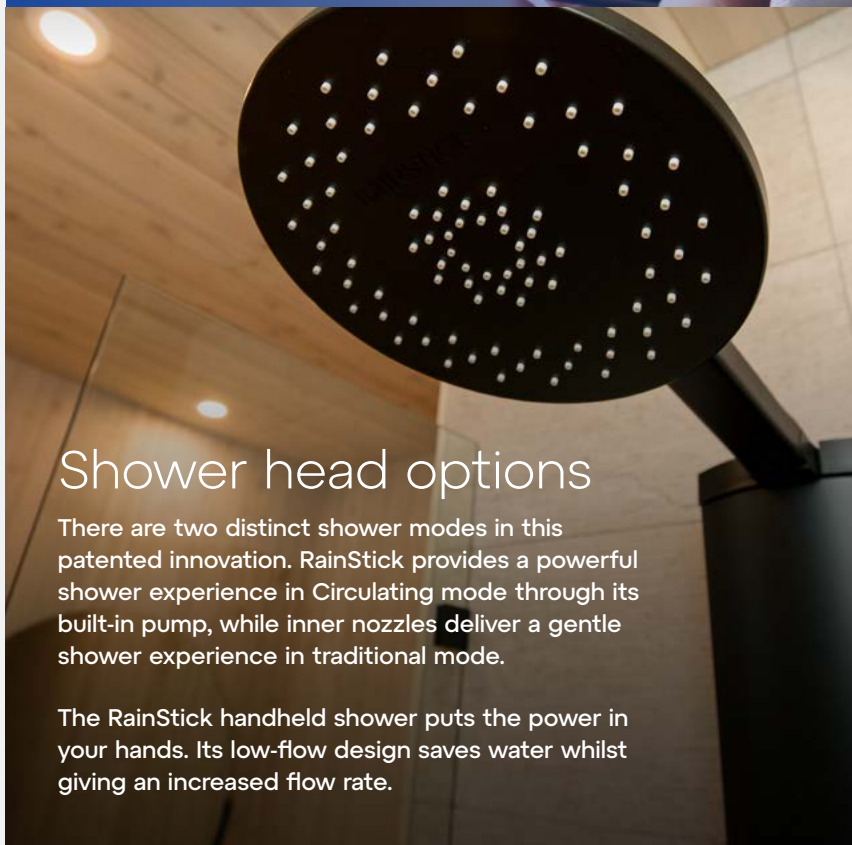

The app: Use the RainStick app to track your savings quickly and conveniently with its WiFi-enabled, smart technology. The app can also be used to turn on RainStick remotely and to notify you when it needs to be refilled with RainStick Original Cleaning Product.

High flow: Offering a high flow, RainStick offers an 11-litre per minute showering experience while only using 1.8 litres of water. In comparison, a standard three-star WELS rated showerhead is around eight-nine litres.

Hygienic: Tested by an ISO-accredited laboratory, RainStick received a rating of "Extremely Hygienic".

Easy to install: The installation process for any new build or remodelling projects is straight forward.

Remote control and track your savings quickly and conveniently with the smart RainStick app.

Shower head options

There are two distinct shower modes in this patented innovation. RainStick provides a powerful shower experience in Circulating mode through its built-in pump, while inner nozzles deliver a gentle shower experience in traditional mode.

The RainStick handheld shower puts the power in your hands. Its low-flow design saves water whilst giving an increased flow rate.
